

WASIF ALI

Engineering Leader | Team Lead & Architect | Node.js · TypeScript · React · AWS

(+92) 321-3555-225 | wasifale@gmail.com | Lahore, Pakistan | linkedin.com/in/wasifali1 | github.com/wasifali

PROFESSIONAL SUMMARY

Engineering leader with ten years in software and the last five running teams. Led a **7-person cross-functional group** — frontend, backend, blockchain, and QA — owning architecture, delivery, and code quality for a marketplace serving **50K+ users** and **1M+ transactions**, plus the 5-person backend group behind ERP microservices for BMW Mini and Motorrad at **200K requests a day**. Most recently contracted for 16 months on Go and React services, leading technical discussions and mentoring junior developers. Have mentored **15+ engineers**, set the code review and QA standards the teams I've led run on, and still write production code in Node/TypeScript, Go, and React. Comfortable being the person accountable for both the technical call and the ship date.

LEADERSHIP & TECHNICAL SKILLS

Leadership & Delivery: Team leadership (5–7 engineers), mentoring & career growth, hiring and onboarding, architecture ownership, technical roadmapping, delivery coordination, code review programs, engineering standards, QA collaboration, Agile/Scrum

Languages & Frameworks: JavaScript (ES6+), TypeScript, Go, Node.js, React.js, NestJS, Express.js, Angular

Backend & Data: PostgreSQL, SQL, MongoDB, Redis, REST APIs, event-driven APIs, queues, microservices architecture, WebSockets/RTC, database design, query optimization, data migrations

Cloud & DevOps: AWS, AWS Lambda, Serverless Architecture, Docker, Jenkins, Git, CI/CD, JIRA

Blockchain / Web3: Solidity, Ethereum, Web3.js, Hardhat, ERC-721/ERC-1155, smart contract security

LEADERSHIP EXPERIENCE

Full Stack Engineer (Contract) — Ibanera · Remote

Jan 2025 – Apr 2026

- **Led technical discussions and mentored junior developers**, working with product managers, designers, and business stakeholders to translate requirements into technical solutions
- **Set code quality standards** through clean architecture, code reviews, and testing
- Architected and implemented **RESTful and event-driven APIs** with a focus on performance and security
- Designed, developed, and maintained scalable web applications with **React** on the front end and **Go** powering backend services
- Built and optimized Go backend systems for **high-throughput, low-latency** workloads; improved application performance, scalability, and data access across services
- Integrated third-party services, authentication mechanisms, and external APIs

Engineering Lead / Senior Full Stack Developer — Big Immersive

2021 – Dec 2025

- **Led a 7-person cross-functional team** — 2 frontend, 2 backend, 1 blockchain, and 2 QA engineers — owning technical direction, delivery planning, code quality, and cross-functional execution
- **Set architecture direction and review standards** across the backend group, making the trade-offs between performance, maintainability, reliability, and delivery speed
- **Established peer code review and mentored 10 junior engineers**, reducing post-release defects by **70%**
- Architected and launched a consumer marketplace (React, Node.js) serving **50K+ users** and processing **1M+ transactions**, including blockchain-based payment and ownership flows
- Led backend development of ERP microservices powering **BMW Mini & BMW Motorrad** digital platforms, handling **200K requests/day across 52 services**
- Designed Redis caching layers and REST APIs, cutting average response time from **1500 ms to 600 ms**, and page load time by **75%** through architecture refactoring and expanded QA coverage
- Built production services in Node.js, TypeScript, PostgreSQL, Redis, queues, and JWT auth with AWS Lambda/serverless workloads; integrated wallet authentication (MetaMask, WalletConnect) into **15+ production applications**

Team Lead / Senior JavaScript Engineer — CreativeMorph

2019 – 2021

- **Led a 5-person team** — 2 frontend, 2 backend, and 1 QA engineer — coordinating implementation and delivery for **3 Silicon Valley startup clients** on aggressive release cycles
- **Designed a NestJS + TypeScript reference architecture** adopted as the standard across **20+ client projects**
- Built an OCR-based image annotation platform and admin dashboards (MERN stack) processing **1000+ images/month for 100+ clients**
- Delivered Microsoft Teams messaging extensions and modular dashboard UIs adopted by **10K+ end users**
- Drove a legacy refactoring effort that lifted test coverage by **20%**; worked hands-on with PostgreSQL, queues, and JWT authentication in production
- Automated cross-tool workflows via custom webhooks for Slack, Trello, JIRA, and GitHub, saving the team **10+ hours/week**

Software Engineer — Novatore Solutions

2016 – 2019

- **Designed and led internal training** on Angular and DevOps practices for **5 engineers**
- Developed payment gateway integrations and CMS platforms for applications serving **100K+ users**, with PostgreSQL, queues, JWT authentication, and AWS-based deployment workflows
- Built Angular front-end architecture with real-time WebSocket features
- Automated production deployments with AWS and Jenkins, reducing release time from **hours to minutes**

EDUCATION

BS Computer Science — PUCIT

2012 – 2016
